

NP-View is a network security audit software.

It creates a **map** that supports **astatic** and **dynamic analyses** of the network configuration.

It exports the results directly to a usable report.

FUNCTIONS

- Automatic establishment of a complete and precise cartography
- Inventory of machines and access lists
- Automatic audit of configurations in a rigorous and comprehensive manner
- Security verification of points of access on the edge of the system
- Review of authorised ports and services between zones or equipment
- Analysis of the routes and flows related to the criticality of the zones

ATOUTS MAJEURS

- Compliance with security standards :
NERC CIP-005
ISO 27002
IEC 62443
- Mapping ergonomics
- Dynamic analysis of all paths
- Consideration of the criticality of zones and equipment
- Improved positioning of customer security

CYBELIUS is a partner of Network Perception. CYBELIUS is a distributor of the NP-View product in France and UK.
